Revolutionary Styrene Dissolver

PS 1025 Reactor Cleaning Accelerator

PICO Chemical Corporation, a Chicago Heights, IL manufacturer, recently developed a revolutionary resin dissolver for the quick and complete removal of stubborn styrene polymer build-up from reactor interiors. Previous cleaning efforts by a styrene resin manufacturer were a nightmarish “exercise in futility”, resulting in long periods of costly downtime and risky, laborious manual follow-up that left incomplete results.

PS 1025 Reactor Cleaning Accelerator was employed, and in just a few short hours, made the entire reactor interior “bare-metal clean” from recent as well as aged resin accumulations. This reusable water-based material has performed many subsequent times without failure for complete and reliable styrene removal, providing additional benefits and accelerating return for the company. As a direct result of **PS 1025**, this customer has experienced a measurable increase in product quality, process efficiencies and production capacity.

PICO Chemical (www.picochemical.com) is a recognized leader of cleaning technology for the coatings industry since 1976. For immediate contact, they can be reached at info@picochemical.com or phone 708-757-4910.
