

PICO is an ISO 9001:2000 certified manufacturer of a comprehensive line of environmentally responsible products formulated to meet the performance demands of today's operations. PICO products can also be custom-formulated for unique applications. Our chemists, technicians and sales representatives have extensive and practical experience to further maximize positive results.

We provide our customers with:

- Cost Reductions (Initial and Use)
- Improved Productivity and Quality
- Prompt, Personal Attention
- Environmental Compliance
- Long-lasting Performance
- Laboratory Support
- Waste Reduction
- Competitive Pricing
- Industry Expertise
- Integrity

### Machining and Grinding Fluids:

PICO machining and grinding fluids are designed for use on all metals, plastics, glass and composites. These products are engineered to provide total performance, whether running small individual sumps or large central systems. Formulated using today's leading chemical technologies and qualified raw materials, they contain balanced lubrication chemistries to provide optimum results. In addition, our products deliver outstanding biostability properties, corrosion protection, post-processing synchronicity, low or no foam and complete aqueous compatibility.

Our comprehensive product line includes:

- Synthetics (true solution and emulsion)
- Semi-synthetics (low to high oil content)
- Soluble oils
- Straight oils

PICO also provides a full line of mist and saw lubricants for "near dry" applications. These eco-based fluids are formulated utilizing natural vegetable base stocks and additives.

### Drawing, Stamping and Forming Fluids:

PICO drawing, stamping and forming fluids are designed for use on all ferrous and steel alloys; all non-ferrous and aluminum alloys; galvanized substrates; pre-painted, pre-coated surfaces and composite substrates. These products are formulated to provide balanced properties including lubrication, corrosion protection, cleanability and post-processing compatibility. All products are crafted to meet production requirements from light-duty stamping to multi-stage deep drawing and forming applications.

Our comprehensive product line includes:

- Synthetics (true solution and emulsion)
- Semi-synthetics (low to high oil content)
- Soluble oils
- Straight oils
- Vanishing lubricants
- Pre-lubes (fluid and solid film)
